

Warehouse Damaged Claims SOP

This newly created document contains portfolio-safe synthetic operating policy. It contains no client data or confidential implementation material.

Policy owner	Warehouse Operations
Revision	WH-CLAIMS-4.2
Effective	29 August 2026
Approval threshold	Manager approval above USD 250

Damaged-shipment claim procedure

1	Create a claim only when the order, package label, shipment event, and claimant identity can be matched.
2	Capture at least two package photographs: one showing the shipping label and one showing the damaged area.
3	For claims up to USD 250, an operations specialist may approve a refund when required evidence is complete and no fraud indicator is present.
4	Claims above USD 250 require a warehouse manager approval before the refund connector is called.
5	If evidence is incomplete, request the missing material and place the claim in a waiting state for seven calendar days.
6	Notify the claimant after approval, rejection, or expiration. A refund must use the original payment method.

Control requirements

Every decision must retain the claim identifier, shipment identifier, cited source evidence, rule version, actor, decision timestamp, confidence, and any approval outcome. Failed connector calls must not be treated as successful refunds.

Escalate when evidence is incomplete, policy sources conflict, package identity cannot be established, fraud indicators are present, or the requested amount exceeds the stated approval threshold.
